

# HPTN 071 (PopART)

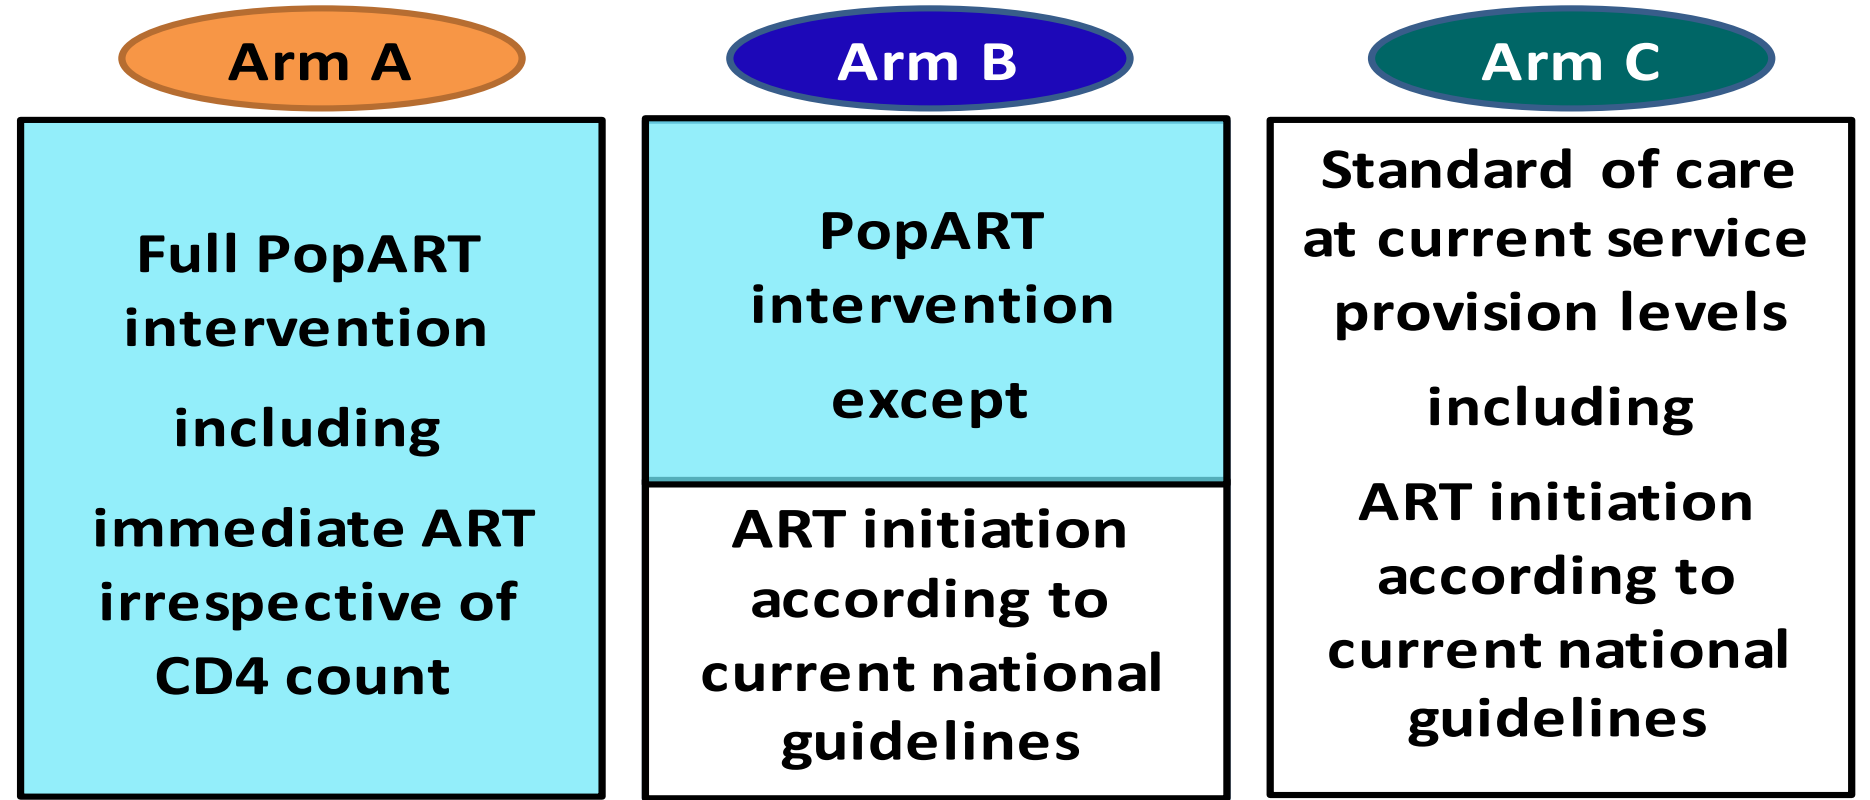

## Population Effects of Antiretroviral Therapy to Reduce HIV Transmission

**IMPACT OF UNIVERSAL TESTING AND TREATMENT IN ZAMBIA AND SOUTH AFRICA:  
RESULTS OF A COMMUNITY-RANDOMIZED TRIAL  
CROI: SEATTLE  
6 MARCH 2019**

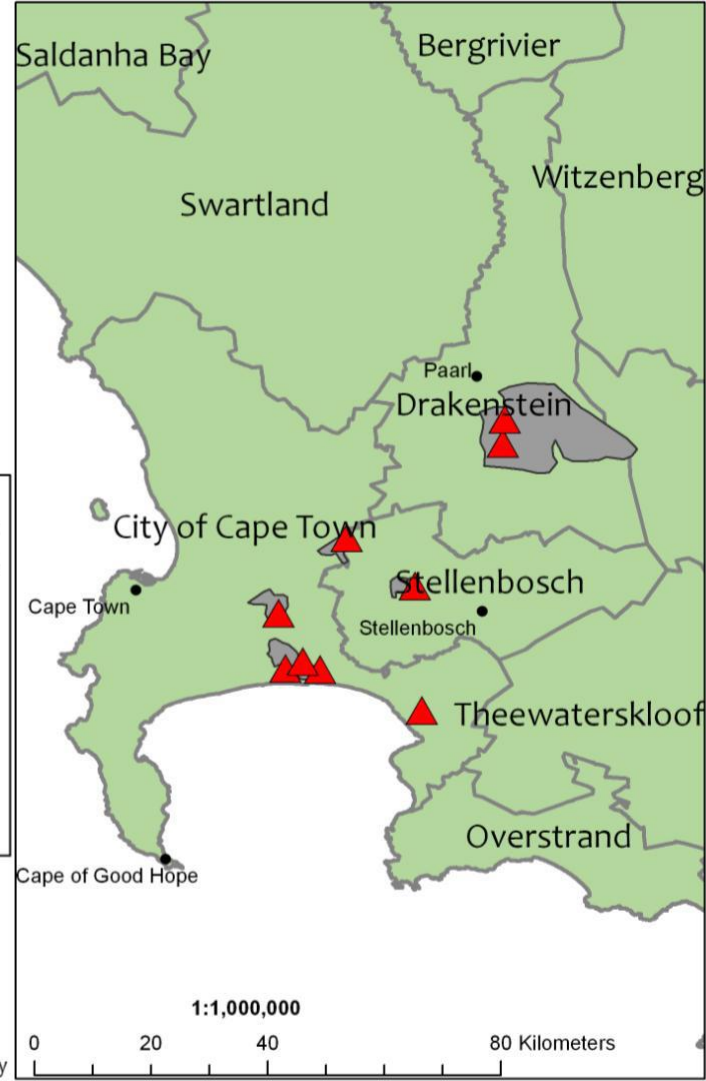

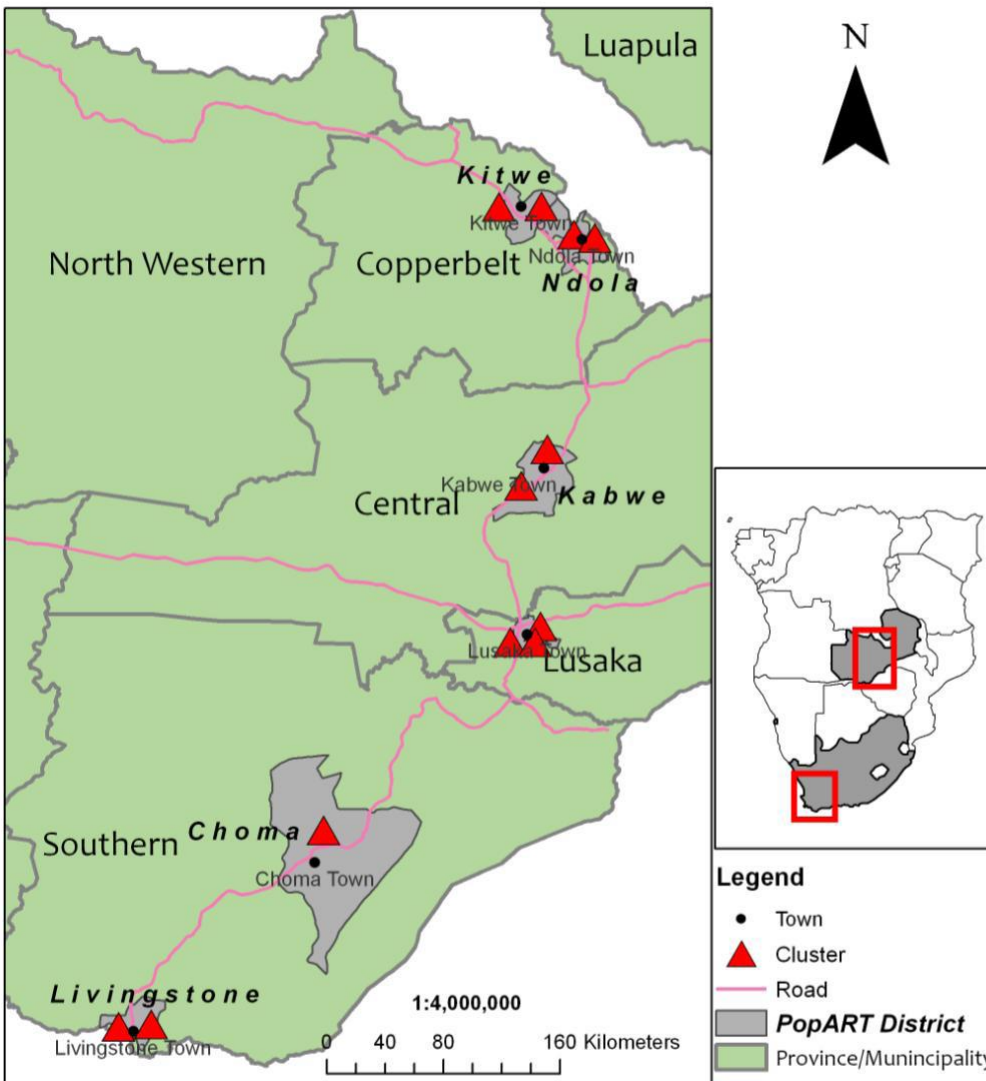

## Background

- Universal testing and treatment (UTT) proposed as strategy to achieve steep reductions in HIV incidence
- Can UTT be delivered in practice in generalized epidemics in sub-Saharan Africa?
- What impact on HIV incidence can be achieved?
- Previous UTT trials have shown inconclusive results
  - SEARCH & TasP trials found no impact
  - BCPP found 30% reduction (borderline significance)
- We report primary results of HPTN 071 (PopART)

# Study Design

**2,500 random sample from each community (aged 18-44)**  
***Population Cohort (N=52,500)***  
**Followed up annually for 36 months**

**21 Communities**

**7 per arm (A, B & C)**

**12 in Zambia**

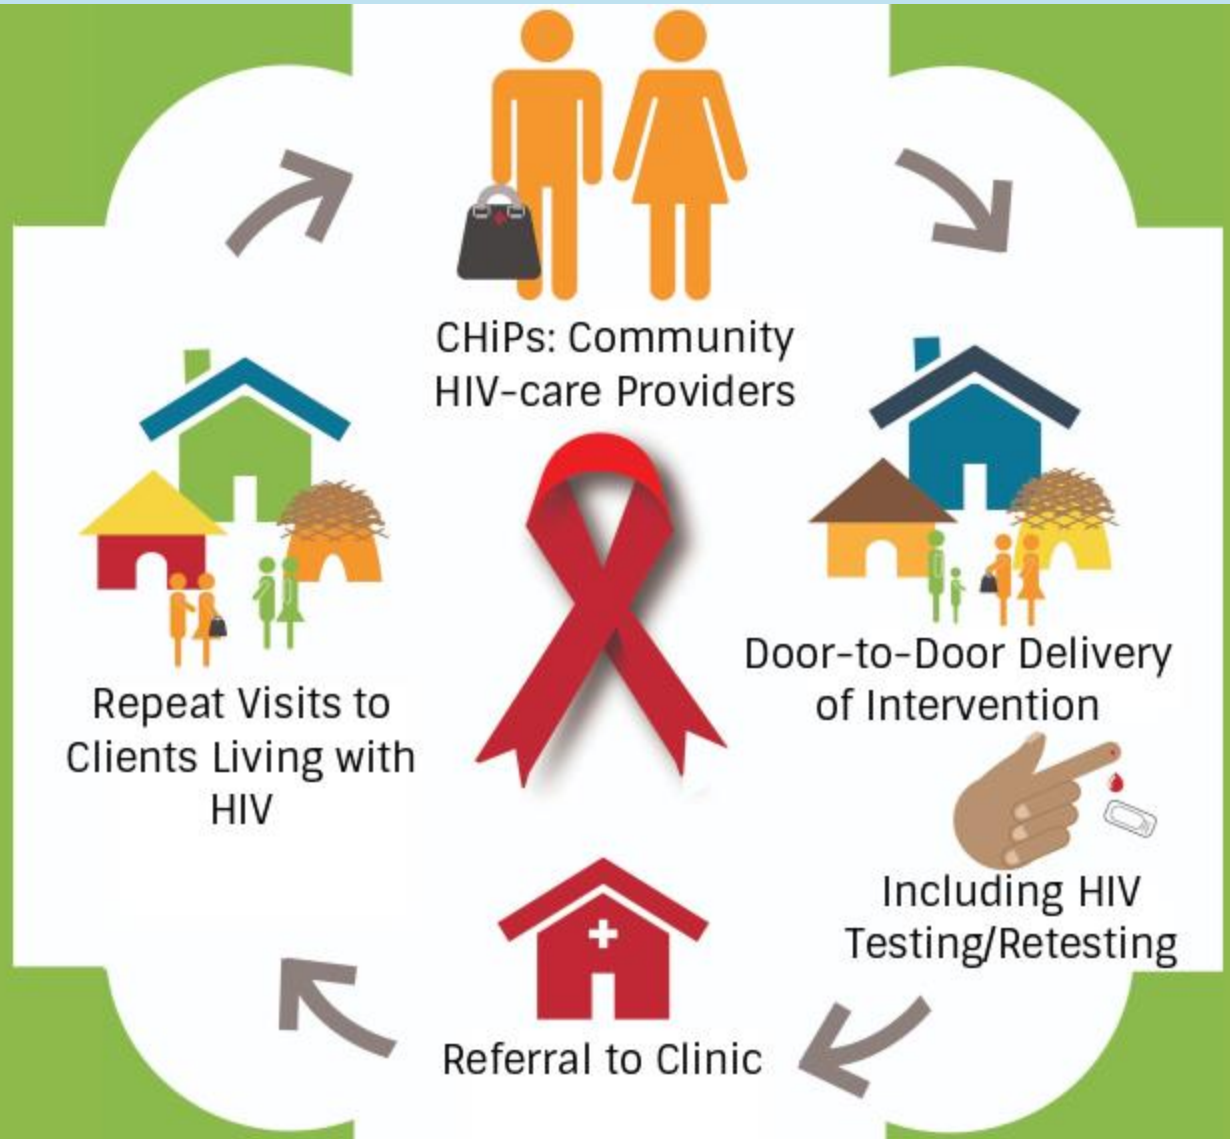

**9 in S Africa**

**Total population ~1M**

## CHiPs Door-To-Door Intervention

- Universal HIV counselling and testing
- VMMC referral
- PMTCT referral
- STI screening
- TB screening
- Condoms

# Study Timeline

# PC enrolment and follow-up

**PC0**  
Enrolled  
38,474

**PC12**  
Terminated  
5,191 (13%)  
  
Retained  
25,289 (66%)  
  
Missed  
7,994 (21%)  
  
PC12N  
Enrolled  
5,014

**PC24**  
Terminated  
5,043 (13%)  
  
Retained  
25,195 (66%)  
  
Missed  
8,059 (21%)  
  
PC24N  
Enrolled  
4,813

**PC36**  
Terminated  
10,566 (28%)  
  
Retained  
27,501 (72%)

# Baseline characteristics of Population Cohort (PC0)

	Arm A N = 12,671	Arm B N = 13,404	Arm C N = 12,399
Male	28%	29%	30%
Age: 18 – 24	40%	39%	40%
25 – 34	39%	39%	38%
35 – 44	21%	23%	22%
HIV Prevalence: Overall	21%	21%	22%
Men	12%	11%	12%
Women	25%	25%	27%
HSV2 Prevalence: Overall	44%	43%	46%
ART (self-reported coverage in HIV+)	33%	41%	35%
Viral suppression (HIV+; 75/community)	56%	57%	54%
Medical Male Circumcision	17%	16%	19%

# Delivery of intervention: ART coverage in arm A & B communities at end of trial

90-90 target = 81%

## Overall Coverage

Arm A: 81%

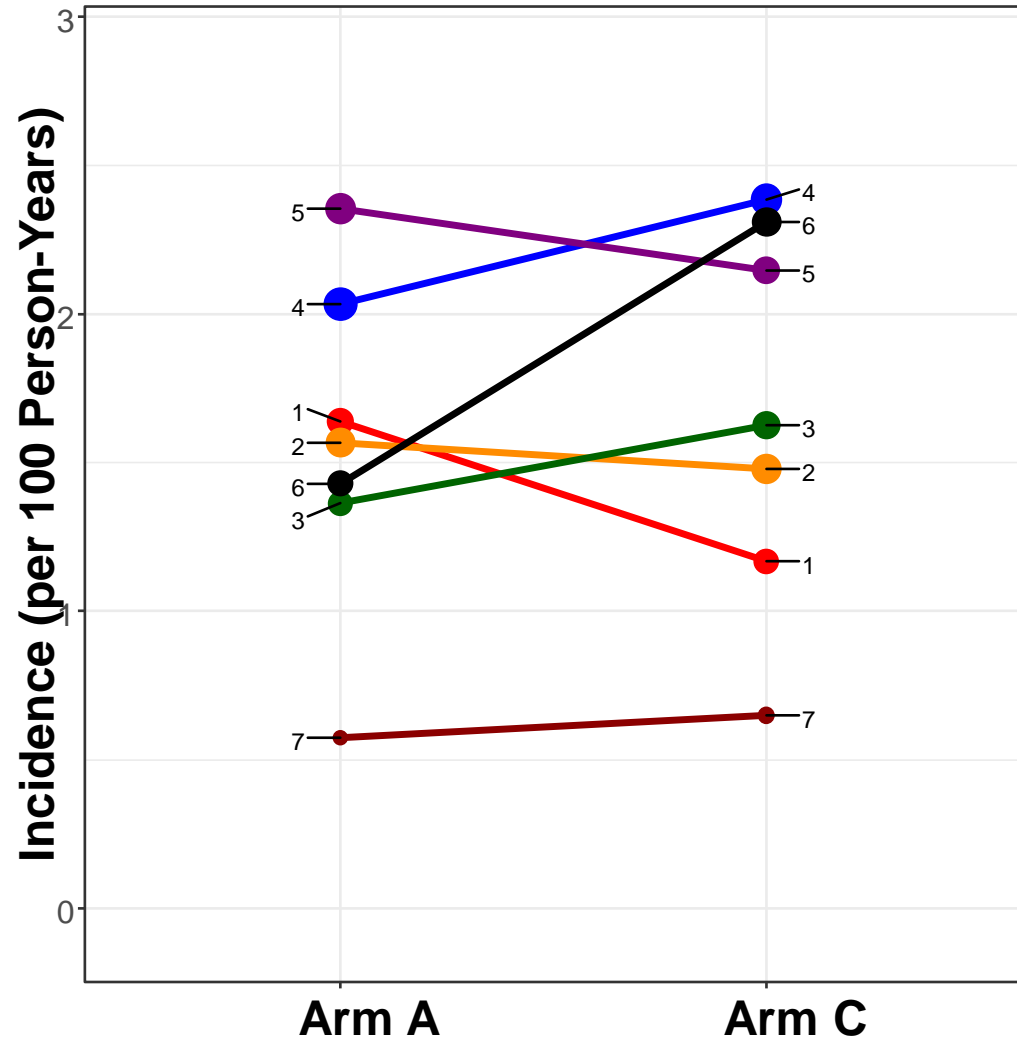

Arm B: 80%

# Primary outcome

- HIV incidence in Population Cohort
- Between PC12 and PC36 (pre-specified)
- Time of infection imputed for seroconverters who were not seen at PC12 and/or PC24
- Impact comparing Arm A vs C, and Arm B vs C
- Using methods for matched cluster-randomized trials

# HIV Incidence by community (PC12-PC36)

Triplets  
 Z Triplet 1   Z Triplet 2   Z Triplet 3   Z Triplet 4  
 SA Triplet 5   SA Triplet 6   SA Triplet 7

Events  
 • 10   ● 20  
 ● 30   ● 40

## Primary analysis: Incidence in PC12-PC36

	Arm A	Arm B	Arm C
HIV Incidence (geometric mean of community incidence rates)	198/12,990 (1.45%)	157/14,149 (1.06%)	198/12,563 (1.55%)
Adjusted Rate Ratio (95% CI)	0.93 (0.74, 1.18)	0.70 (0.55, 0.88)	1
Incidence compared to Arm C	7% reduction	30% reduction	
P value	0.51	0.006	

Adjusted for age category, sex and baseline community HIV prevalence.  
Reported numbers include imputation for PC12 and PC24 missed visits

## Viral suppression at PC24

	Arm A	Arm B	Arm C
Viral suppression (Geometric mean of community %)	1531/2159 (72%)	1318/1891 (68%)	1480/2183 (60%)
Adjusted prevalence ratio (95% CI)	1.16 (0.99, 1.36)	1.08 (0.92, 1.27)	1
VS compared to Arm C	16% increase	8% increase	
P value	0.07	0.30	

Adjusted for age category, sex.

# HPTN 071 (PopART) Summary

- PopART achieved the first two UNAIDS 90-90 targets in arms A and B
- High rates of viral suppression achieved
- PopART with ART according to local guidelines (Arm B) reduced HIV incidence by 30% in these high burden settings (from 1.6% to 1.1%).
- Lack of an effect in the full intervention arm (Arm A), where universal treatment was delivered ahead of change in guidelines, was surprising and not explained by lower rates of viral suppression.
- Further analysis of quantitative, qualitative and phylogenetic data in progress to explore and explain this dissonant finding.
- **Community-based services for *universal* HIV testing and linkage are a key component of combination prevention in the global effort to achieve effective HIV control.**

# ACKNOWLEDGEMENTS

- Sponsored by the National Institute of Allergy and Infectious Diseases (NIAID) under Cooperative Agreements # UM1 AI068619, UM1-AI068617, and UM1-AI068613
- Funded by:
  - The U.S. President's Emergency Plan for AIDS Relief (PEPFAR)
  - The International Initiative for Impact Evaluation (3ie) with support from the Bill & Melinda Gates Foundation
  - NIAID, the National Institute of Mental Health (NIMH), and the National Institute on Drug Abuse (NIDA) all part of the U.S. National Institutes of Health (NIH)
